Business Profile:

S.D.S. is a service company that provides international consultancy and planning services in HDD "horizontal directional drilling".

Management Directory:

We are an international team that adapts through collaboration with partners for each project.

Company History

"Seeliger Drilling Services" was founded in the United Arab Emirates during April 2000 by Joerg Seeliger in Abu Dhabi.

Our professional experience in the specialist field of "Horizontal Directional Drilling" started during March 1991 in Germany.

Services

- Project monitoring
- Consulting and planning of HDD equipment and supplies
- Planning of HDD Projects
- Software development for HDD (HDD Quickplaner)
- Rental of various measurement systems
- Survey engineer for cable-guided and "walk-over" measuring systems
- Driller / Trainer

Through our years of experience and good cooperation with manufacturers and suppliers, we can assist you with a wide spectrum of services.

Reference

Included within our list of satisfied clients, we have a reference from a major international construction group called Bauer who are a longstanding client of ours and who have employed us, and continue to employ us, for our services on the construction of pedestrian tunnels in United Arab Emirates and Qatar.

Since 2001, in collaboration with Bauer's subsidiary in Abu Dhabi, Bauer International FZE, we have carried out a unique process of soil stabilization for 22 tunnels under difficult ground conditions. Our latest tunnel project with Bauer started in late 2013 with their subsidiary in Doha, Bauer International Qatar, where a pedestrian tunnel is currently being constructed under the Corniche Road which is the busiest road in Doha City.

Our works for Bauer have included the installation of over 986 holes well below a tolerance of 1% (<5 cm) whereby all of the holes were created by a conventional measurement technique between depths of 1.5 m to 10 m. Despite the demanding constraints involved with carrying out the works, we have achieved a high quality product to the full satisfaction of Bauer.

We have worked on many other unconventional and challenging projects where we have provided our services as Surveyor, Drill or Project Supervisor. These projects include Taiwan's offshore drilling for Liouciou's main power line and 2 x 2150m offshore drilling in St. Petersburg for a gas pipeline or the Suez Canal gas pipeline.

We would also like to emphasize that we have significant global experience and have carried out many specialist horizontal directional drilling projects in places like Nigeria, Uzbekistan, Russia, Norway, Taiwan, Malaysia, Saudi Arabia, United Arab Emirates, Doha, Sudan, Egypt, South Africa and Europe.

The horizontal directional drilling experience of our staff goes as far back as 1991 of which includes providing consultation and advice regarding the implementation of specialist and unique techniques of which have been later successfully put into practice.

More information about us can be found in the "HDD Practice Handbook" by H.-J. Bayer (Eds.) Publishers Vulkan, ISBN 3-8027-2734-7, as well in the magazine "No-Dig International" of November 2002 and summer 2017 in the Trenchless International.
